

DCSUG Newsletter

Washington, DC SAS Users Group

Third Quarter Meeting

When: Tuesday, September 9, 1997
Time: 8:30a.m. to noon
Place: Bureau of Labor Statistics
Postal Square Building
Room G440
First Street North East
Washington DC

Agenda:	8:30 - 9:00	Registration and refreshments
	9:00 - 9:15	Announcements
	9:15 - 10:15	Michael Bretz, U.S. Bureau of the Census Generation of Complex Tables Using SAS® Report Writing Tools
	10:15 - 10:30	Break
	10:30 - 11:00	Lawrence Altmayer, U.S. Bureau of the Census Hot-Deck Imputation: A Simple DATA Step Approach
	11:00 - 11:30	Ian Whitlock, Westat Inc. PROC SQL - What Does It Offer Traditional SAS® Programming?
	11:30 - noon	User-to User Questions and Answers Moderators - DCSUG officers

Visitors must use the visitor's entrance on First Street NE. Directions for those taking Metro: Take the Red Line to Union Station. Exit the station via the Amtrak exit, but do not go up to the train level. Instead, after going up to and out through the farecard gates, turn to the left where there is an exit to the street (First Street NE). Directly across from the exit are the employee and visitor's entrances to the building. After checking in with security, take the main elevators down to the G level. **BRING PICTURE ID!**

If you have special needs and are planning to attend this meeting, please contact any DCSUG officer no later than 8/29/97

SAS® is a registered trademark of the SAS Institute, Cary, NC

President's Message

Peter Knapp

One reason I became involved in the DC SAS Users Group was to talk to other SAS professionals and ask them how they would approach certain coding problems I run across in my work. Because I maintain and improve generic SAS programs that are repeatedly used by many different people, I need to strike a balance between writing efficient code and writing readable code. Finding this balance is not something I can get from a book. I'm glad that I can turn to members of DCSUG to discuss the fine points of the programming issues I wrestle with. I hope that you will attend the September 9 DCSUG meeting where you can share your programming questions with other SAS users. Of course you can also learn from our featured speakers, Michael Bretz, Larry Altmayer and Ian Whitlock. I hope to see you there!

Speaker Abstracts

Generation of Complex Tables Using SAS Report Writing Tools

Michael Bretz, Bureau of the Census

Abstract

The anatomy of a table consists of three parts: a stub, a header and cells. A stub is a collection of row descriptions based on variable values. A header is a collection of variables in the column dimension. The cells report counts or values derived from analysis variables. The Census Bureau defines the complexity of a table by its "stub". The stub may contain one or more subtotals that tally to a total(s) and/or groups of mutually exclusive row descriptions. We refer to these as asymmetrical tables.

SAS procedures that produce tables have many strengths and weaknesses. Using the power of SAS formats in combination with these procedures, one can create a generalized approach to produce complex asymmetrical tables. This paper demonstrates this approach using sample data and SAS formats in combination with the TABULATE and COMPUTAB reporting procedures.

Michael Bretz is a SAS Technical Consultant for the Economic Area at the U.S. Bureau of the Census. Michael has been using SAS for over 10 years and has expertise in BASE SAS, SAS/FSP, SAS/AF, SAS/EIS, SAS/GRAPH, SAS/ACCESS and SAS/CONNECT software on min-icomputer, micro-computer and UNIX-based environments.

Hot-Deck Imputation: A Simple DATA step Approach

Lawrence Altmayer, U.S. Bureau of the Census

Abstract

Hot-deck imputation is a means of imputing data, using the data from other observations in the sample at hand. This paper deals with a method of imputation we used for the Survey of Adults on Probation. In this method, we first attempt to impute race based on other variables in an observation. We impute the remaining missing race data, and age and gender, using the same variable in prior or later observations in the dataset. This method uses macro variables to subset the data into groups within which imputation is done. It also uses arrays to keep track of values to use for imputation.

Larry Altmayer has been with the U.S. Census Bureau for eighteen years and is a computer specialist. He has more than seven years SAS programming experience, most recently with

macros. Larry is also the Secretary of DCSUG.

PROC SQL - What Does It Offer Traditional SAS Programming?

Ian Whitlock, Westat Inc.

Abstract

PROC SQL plays two important roles in SAS: 1) Connecting SAS with other data base systems, and 2) Helping the traditional SAS programmer. This paper looks at the second role. SAS programming problems are presented where PROC SQL has a distinct advantage over SAS programs that do not use this procedure. By focusing on such problems with coded solutions I hope to answer the question, "When is it most appropriate to consider using PROC SQL in a SAS program?"

Ian Whitlock is a senior systems analyst at Westat working on survey research problems. He has been programming largely in SAS since 1981 using an interactive environment to develop programs for execution in a batch environment. He is active on SAS-L, and has presented papers at national, regional, and local SAS User Group meetings.

Questions and Answers

Moderated by DCSUG Officers

Bring your SAS programming or procedure questions to DCSUG and its members. During this open session, you can ask questions of and get answers from experienced SAS users. All are welcomed to participate

If you are not currently a paid member of the DCSUG and are planning to attend the meeting, please call Karen Dennis at 301-294-3876, by September 5th and leave your name. Security at the Bureau of Labor Statistics is very tight and having your name on a list of possible attendees will make your entrance to the building easier.

Desktop Special Interest Group

by David Barnes

DCSUG's Desktop Special Interest Group will meet the evening of July 23rd at Westat, Inc. 1650 Research Blvd. in Rockville at 7:30PM. **Microsoft Access and SAS, Part 2: Accessing Distributed Heterogeneous Databases in a Client Server Environment** will be presented. If you have any suggestions for future meeting topics, speakers, or alternate locations, or if you'd like to be added to our group's mailing list so you can get announcements of upcoming meeting events, please contact David Barnes at (301) 350-4752 or Yesvy Gustasp at (301) 589-4530. Also, if you need a ride from the Metro, please call either one of us.

Directions to Westat: Take I-270 8 miles from the Capital Beltway to exit #6B - Route 28 (toward Darnestown). Once on 28, go past the traffic light at the Shell station and turn right at the next traffic light, which is Research Blvd. The 1650 building is less than 1/4 mile on the left. You can park in any non-reserved space. Signs will be posted in the lobby to direct you to the meeting room. Westat has many buildings on Research Blvd. so make sure you're at 1650.

SESUG'97 - The fifth Annual Conference of the SouthEas SAS Users Group, September 21-23, Omni Jackson Hotel, Jacksonville, Florida

NESUG'97 - The tenth Annual Conference of the NorthEast SAS Users Group, October 5-7, Renaissance Harbor Hotel, Baltimore, Maryland

DCSUG 1997 Steering Committee OFFICERS

CHAIR -- Peter Knapp

SASTALK

by Ian Whitlock

A common SAS question is how to write a program to read a file of comma separated variables where the first line gives the variable names and the remaining lines are the data. To be explicit, consider the following data

ID	NAME	RATE	SEX	AGE	WEIGHT
S100001	B a r b a r a Jones	0.33	F	13	123
S100002	John Allen	1.43	M		140
S100003	Bill Cater	0.75		15	120
S100004	Mary Smith	1.86	F	27	134

The first row is different because it contains the names of the variables rather than their values. The table does not explicitly say whether a variable should be numeric or character, nor does it tell us how long the character values are. In this simple example we can guess by the meanings of the names and looking at the values.

An input program for this table is not hard to write. For example:

```
data csv ;
  infile csv dsd lrecl = 80 firstobs = 2 missover ;
  input id :$char7. name :$char25. rate sex age weight ;
run ;
```

The DSD option on the INFILE statement is important because it tells SAS to treat consecutive commas as a missing field, and to handle quoted fields correctly. The other important option is LRECL. If the value is too short, the whole record will not be read. We could make it a macro parameter, LRECL.

Writing the INPUT statement requires:

- Getting the names of the variables,
- Separating numeric from character, and
- Getting wide enough formats for the character variables

The names are easy; since they are all there on the first line. We can read each variable and output it for later use. The EOF option correctly handles the end-of-file in the presence of double trailing @-sign.

```
data names ;
  infile csv dsd lrecl = &lrecl obs = 1 eof = eof ;
  input name $ @@ ;
  nv + 1 ;
  output ;
return ;

eof:
  call symput ( 'nv' , left(put(nv,5.)) ) ;
return ;
run ;
```

The remaining questions are somewhat harder. Can we make decisions based on the second row? No. Character fields may be wider further down, and fields that appears to be numeric may contain characters further down. Thus we really have to read the whole file in order to know how to read it properly. We will have to read all the variables into 200 byte character variables. For

each one, we will have to decide when it is character, and keep track of the maximum length. So we will need 3 arrays - one to reference the values read, and two arrays to keep track of the type and maximum length. Here is the complete step.

```

data inpinf ( keep = name infmt ) ;
  length infmt $ 10 ;
  infile csv dsd firstobs = 2 eof = eof missover ;
  array v (&nv) $ 200 v1 - v&nv ;
  array maxlen (&nv) _temporary_ ;
  array type (&nv) _temporary_ ; /* missing=num, 1=char */
  input ( v1 - v&nv ) ( :$char200. ) ;

  do i = 1 to &nv ;
    if input ( v ( i ) , ?? best12. ) = .
      and v ( i ) ^= ' ' then type ( i ) = 1 ;
    maxlen ( i ) = max ( maxlen ( i ) , length ( v ( i ) ) ) ;
  end ;
return ;

eof:
  do i = 1 to &nv ;
    if type ( i ) then
      infmt = ' :$' || trim(left(put(maxlen(i) ,3))) || '.' ;
    else
      infmt = ' ' ;
    set names ;
    output ;
  end ;
return ;

```

INPINFO has both the name and format on it. PROC SQL can translate it into a macro variable.

```

proc sql ;
  select name || infmt into : inplist separated by ' '
  from inpinf ;
  %let nvar = &sqllobs ;
quit ;

```

With this preparation the final step is trivial.

```

data csv ;
  infile csv dsd lrecl = &lrecl firstobs = 2 missover ;
  input &inplist ;
run ;

```

Calendar of Meetings and Events

This feature is meant to give users an idea of some of the activities of area users groups and special interest groups, as well as regional and international groups. If your group would like to be regularly included in this feature, please call Mike Rhoads or one of the DCSUG officers. There is a DCSUG directory with phone, fax, and E-mail contact information elsewhere in this newsletter.

A One-Day Workshop for Users of SAS[®] System Software

Baltimore: Wednesday, October 9 1997

Renaissance Harborplace Hotel

Offered in conjunction with the North East SAS Users Group (NESUG) 1997 Annual Meeting
NESUG '97 Info: <http://sasuser.pace.edu/nesug/97>

SAS[®] System Programming Efficiencies: Tips and Techniques

A **one-day workshop** on how to improve the efficiency of your SAS[®] System programs and applications.
Appropriate for all operating systems and platforms.

Learn how to **reduce** CPU Utilization, Input/Output and other resource requirements for DATA and PROCEDURE Step execution.

Discover the SAS[®] Procedures which *reduce reliance* on the DATA STEP and which *manage* your Data Sets and Data Libraries.

Implement SAS[®] System and Data Set Options to select only the observations and variables you need to complete task requirements and obtain utilization and performance statistics.

Suitable for:

Beginning to Intermediate SAS[®] System Software programmers

Researchers, Business Analysts and other "end users"

Systems Programmers who need to know how the SAS[®] System creates and uses data sets

Instructor: Andrew H. Karp, President of Sierra Information Services, Inc., is a 15 year SAS[®] System user with extensive experience in using the software on large data sets. An Invited Speaker at NESUG '97, Andrew has given over 40 papers at user group conferences in the United States, Canada, New Zealand and Australia, including NESUG '95, SUGI 21 and SUGI 22, as well as the DC SAS Users Group. He has also taught classes in SAS System topics at the University of California, Berkeley and the University of Auckland, New Zealand. Sierra Information Services, Inc. is a designated Quality Partner™ of SAS Institute, Inc.

Visit our **web site** for more information: **[http:// www.SierralInformation.com](http://www.SierralInformation.com)**

Workshop Fees...register early and save \$20!

\$209 on/before September 21

\$229 after September 21

Registration/Additional Information:

- **Toll Free Telephone: 1-888-747-1411** Fax: 415/441-9175
- **Electronic Mail Address: [SierralInfo @ AOL.COM](mailto:SierralInfo@AOL.COM)**
- **Credit Cards Accepted:** VISA and MasterCard
- **Mail:** Checks payable to: **Sierra Information Services, Inc.**
1489 Webster St. Suite 1308 San Francisco, CA 94115

Federal Tax ID: 94-3199501

Important Details: We reserve the right to cancel these workshops, and if we do, Sierra Information Services, Inc. is **not liable for special or consequential damages**. Refunds subject to **\$50 cancellation fee** if received on or before 9/20. A **\$100 cancellation fee** will be imposed for cancellations received after 9/20. GETTING A PROMOTION ISN'T THE ONLY WAY TO CLIMB THE CORPORATE LADDER..

Thousands of high-level/experienced SAS professionals have discovered an easier way to build their careers - by working on higher visibility projects, for more \$\$\$\$. . . as a consultant. So if you're looking for an exciting opportunity to advance your career, consulting may be the ideal solution.

WHY CHOOSE INTECH?

INTECH, Inc., a Software & Management Consulting firm headquartered in Fairfax, Virginia, provides quality SAS, and other software professionals to Fortune 500 companies. We offer the most comprehensive benefits for consultants in the industry, comparable to those of our clients. From paid leave to full insurance coverage, everything is taken care of - because at INTECH, we don't just hire consultants for contracts... we hire employees. We are currently recruiting nationwide, with positions in the Atlanta, Indianapolis, and WashingtonDC metropolitan areas. Contact us today for a complete listing of openings and jump start your career up the corporate ladder!

** For more information, contact Ricky Valencia at Ricky@intechweb.com or FAX resume to (703) 359-4321*

CHEVY CHASE BANK

Around the Beltway and Beyond Our Technology Keeps Banking Moving

Chevy Chase has made a commitment to technology that has allowed us to remain at the forefront of the banking industry and to innovate new services for our customers. Along with great salaries and benefits, we offer a diverse, team-oriented technology environment.

We have immediate opportunities for SAS Programmers/Analysts to develop and maintain SAS programs in support of Finance, Credit Card, and Marketing environments. We are looking for individuals with a BS in Computer Science or related field with at least three years of SAS programming experience, preferably in a mainframe environment. Financial institution and Oracle DBMS experience helpful.

Opportunities are available in our in Frederick, MD, Chevy Chase/Bethesda, MD, and Tysons Corner, VA locations. Interested candidates may forward their resumes in confidence to:

Chevy Chase Bank
Attn: JZ/SQN
6151 Chevy Chase Drive
Laurel, Maryland 20707
(301)369-3023 (fax)
please include desired location

DCSUG Membership Directory

DCSUG is considering publishing a membership directory in 1997, containing members name, work affiliation (name of institution), work telephone number, e-mail address, and any areas of expertise that you would be willing to identify. This directory would be provided to DCSUG members only and would not be given to outside sources. If you would like to be included in such a directory please mark the boxes below, as appropriate.

- I would like to be included in the membership directory DCSUG is considering publishing.
Include my name, work affiliation, and work telephone number.
- Include my e-mail address as shown on this form.
- Include the following areas of expertise (up to 2 products, platforms).

Mail to:
Washington DC SAS Users Group
P.O. Box 44670
Washington, DC 20026-4670

1997 Meetings

Plan ahead and mark your calendars now. The DCSUG will meet on the following dates in 1997: **September 9, December 2.** Meeting times and locations to be announced. If at any time you have a question about an upcoming meeting or other DCSUG information, call one of the members of the Steering Committee.

Remember to Join DCSUG!!!

Don't forget to renew your DCSUG membership for 1997. Dues are used to defray the costs of producing and mailing the newsletter and provide refreshments at our meetings. You'll make sure that you keep receiving the newsletter and keep DCSUG going. If you have not joined DCSUG, now is a great time to do so. Joining DCSUG is as easy as completing the membership form included in this newsletter. Individual memberships are only \$10; corporate memberships are \$50.
